## LIMITATIONS

This has a quick cure time so it is best to work one small area at a time. Applying product to thick may cause product failure. All new concrete must be cured for at least 30 days prior to application.

## INSTRUCTIONS

**PRODUCT MIXING:** Mix small amounts at a time. One 8 oz squat cup left in each component of Quick Fix is a great method to use. Adding equal amounts (*maybe 4 oz or less depending on amount needed*) of both Part A and Part B into a 16 oz squat cup, stirring with a paint stick and then adding some powder (TCP Texture Mix) to thicken a bit then pouring into repair area is the very best method to use with this product.

**SURFACE PREPARATION:** Refer to the TCP Training manual and the ICRI standards for proper surface preparation.

**CLEANUP:** Use xylol

**FLOOR CLEANING:** Caution! Some cleaners may affect the color of the floor installed. Test each cleaner in a small area, utilizing your cleaning technique. If no ill effects are noted, you can continue to clean with the product and process tested.

**RESTRICTIONS:** Restrict the use of the floor to light traffic and non-harsh chemicals until the coating is fully cured (see technical data under full cure). It is best to let the floor remain dry for the full cure cycle.
